

Gas Cylinder Safety

Really no PPE for you, so you must follow the safety rules when handling the gas cylinders

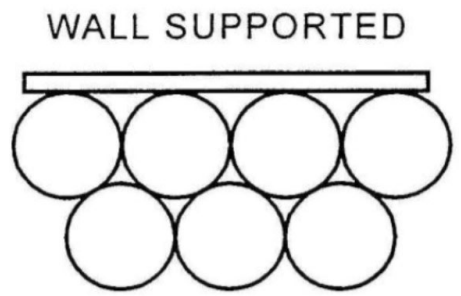

Interesting information about the tanks

- Mark empty cylinders
- Secure cylinders by chaining them to the wall

Use a trolley to move gas cylinders

Correct Nesting (contact on 3 Points)

1. Know what's in the tank
 - The color of the tank doesn't contain information on the gas (the labels contain gas information)
 - Hazardous gases needs proper handling and careful ventilation during storage and transfer (flammable, toxic, corrosive etc)
 - Gases used in manufacturing of illegal drugs need proper procedure for security

2. Gas tank transportation and storage
 - Temperature < 170 F
 - No direct sunlight
 - Caps on
 - Proper nesting

3. Check the connections
 - slow turns
4. Other safety features
 - pressure relief device
