

REPAIRING COMPUTERS AND OTHER ELECTRICAL DEVICES

Caitlin Hetherington

Levine group

When repairing computers and other electrical devices:

- Always shut down and unplug power supply of any device before servicing it
- If smoke is observed coming from power supply or other electric device (by sight or smell):
 1. Stop what you are doing and unplug that device immediately
 2. Allow it to cool/discharge before attempting any repair

- In the event of an electrical fire:
 1. Use only a fire extinguisher rated for electrical fires (rating C)
 2. Never use water if power is still on
